## Week 2 Quiz

Correct

LATEST SUBMISSION GRADE 100% 1/1 point 1. How do you use Image Augmentation in TensorFLow O You have to write a plugin to extend tf.layers Using parameters to the ImageDataGenerator With the keras.augment API With the tf.augment API ✓ Correct 2. If my training data only has people facing left, but I want to classify people facing right, how would I avoid Ouse the 'flip' parameter and set 'horizontal' Ouse the 'flip' parameter Use the 'horizontal\_flip' parameter Ouse the 'flip\_vertical' parameter around the Y axis ✓ Correct 3. When training with augmentation, you noticed that the training is a little slower. Why? Because the image processing takes cycles O Because there is more data to train on Because the augmented data is bigger Because the training is making more mistakes Correct 4. What does the fill\_mode parameter do? ○ There is no fill\_mode parameter O It creates random noise in the image It attempts to recreate lost information after a transformation like a shear It masks the background of an image

	<ul> <li>It gets overwritten, so be sure to make a backup</li> <li>A copy is made and the augmentation is done on the copy</li> <li>Nothing, all augmentation is done in-memory</li> <li>It gets deleted</li> </ul>	
	✓ Correct	
6.	How does Image Augmentation help solve overfitting?	1/1 point
	O It slows down the training process	
	It manipulates the training set to generate more scenarios for features in the images	
	It manipulates the validation set to generate more scenarios for features in the images	
	It automatically fits features to images by finding them through image processing techniques	
	✓ Correct	
7.	When using Image Augmentation my training gets	1 / 1 point
	<ul><li>Slower</li></ul>	
	○ Faster	
	Stays the Same	
	Much Faster	
	✓ Correct	
8.	Using Image Augmentation effectively simulates having a larger data set for training.	1 / 1 point
	<ul><li>False</li><li>True</li></ul>	
	✓ Correct
